

Rudolf Zimmermann

Securetec

Member of the Board

Panel Session:

“Surveillance and Reconnaissance Systems for Police Forces - Traffic Control, Closed Circuit Television, Personal Control”

Tuesday, January 29th, 11:30-13:30

Curriculum vitae

Rudolf Zimmermann has more than 25 years experience in International Security issues relating to narco-terrorism and contraband. Mr. Zimmermann has the lead contact for the German defence contractor MBB and its successor Daimler Benz Aerospace. The multimillion dollar technology development programs that Rudolf leads included the conceptualisation, design and development of sensors for the detection and identification of all forms of contraband including narcotics, explosives and other terrorist materials. Mr. Zimmermann has been part of many International scientific and technical associations, presented various papers and programs. Securetec AG was formed by Rudolf Zimmermann to fully commercialise a line of field deployable biosensors. Initial products have included DrugWipe and Vapour detection of narcotics, explosives and chemical substances in containers and surfaces. Securetec has been highlighted as one of the fastest growing biosensor companies in Bavaria. Securetec has recently expanded to develop biosensors for infectious diseases in commercialised biosensors for non-medical applications. In the centre of interest of the daily-realized companies philosophy is a good customer relationship. The special merits of Securetec AG are the common definition of customer's requirements due to the latest research results of the biosensor and to attend the customer during the phase of the product introduction, offering full support to the customer. The use of the products on the scene of action with best possible technical and economical effort brings both, customer and the Securetec AG into a leading function in Europe.
